Research Intern at Genesis Molecular AI, with Dr J. Bose, Dr N. Boffi, Dr M. Al-Shedivat — Jan – March 2026
- WIP (flow maps, steering, protein generation).

Research Intern at Microsoft Research, Cambridge, with Dr J. Gladrow & Dr K. Kalinin — Nov 2023 – Feb 2024
- Engineering work on Diffusion Models, Latent Diffusion Models, VAEs, simple video models, Neural ODEs.
- Theoretical analyses of Diffusion Models via SDEs, PDEs. *(Patented.)*

MSc Dissertation, Information Theory for GNNs, with Dr. I. Ceylan, Prof. M. Bronstein — Feb – Aug 2023
- Developed a formal information-theoretic framework to fully characterise informational bottlenecks in Graph Neural Networks, including over-smoothing and over-squashing. **Received the Tony Hoare Prize for the best dissertation of the year.**

BSc Research Project, DeFi analysis, with Dr A. Gervais — Jan – Aug 2022
- Analysed DeFi markets on the Ethereum and BNB Chain blockchains, quantified offered financial security.
- Created a program in Go using a custom GPU version of Bellman-Ford in CUDA to detect real-time arbitrage opportunities, and to quantify historically how much more assets could have been extracted, scanning $864\times$ more markets than previous SOTA within 1.5 ± 1.2 seconds, outperforming past arbitrage by on average 0.06 ETH and up to 4.4 ETH.

Student Research Project, Scala 3.0 Compiler Extension, with Prof M. Odersky — Jun – Sep 2021
- Started and contributed to the thread-safe re-implementation of "lazy-vals", in the Scala 3.0 compiler.
